Two products live on the open web: I decide what each one has to do, build it with AI coding assistants, deploy it to a VPS and keep it running. Second-year AI Engineering student — my own code is Python and C++ at a basic level, and what I bring is direction, testing and shipping.

EXPERIENCE

2026 — present

Founder — grdasturxon.tech **LIVE**

Multi-tenant QR-menu SaaS for cafes and restaurants, in Uzbek, Russian and English.

- Decided what it had to do, built it with AI coding assistants, put it on a VPS and keep it running: an order reaches the waiter assigned to that table over a React Native app and web push, three Docker containers behind Caddy on an Oracle Cloud VPS.
- Noticed the live view counter double-counting — two guests opening a menu at the same moment created two counters — and saw the fix through: one migration merged the rows and repaired the constraint.
- 519 tests across 25 files guard what would cost a customer money: four prove one venue cannot read another venue's data, one fails the build if the models and the migrations drift apart. 19-table PostgreSQL schema, 24 migrations, no data lost.

Python · FastAPI · PostgreSQL · SQLAlchemy · Alembic · Docker

2026 — present

Founder — uzbekpdf.uz **LIVE**

Fifteen PDF tools, explained in Uzbek.

- Merge, split, compress, rotate, edit, watermark, protect and unlock PDFs, and convert to and from Word, PowerPoint and JPG, plus Excel to PDF — all behind one REST API.
- Accounts with hashed passwords, Google sign-in and an admin view of users and usage. Free use is capped at 3 files a day and 20 MB an upload; a paid tier lifts both.
- An uploaded file lands in a temporary directory and a scheduled job deletes it — nothing a visitor uploads is kept.

Python · FastAPI · SQLAlchemy · pypdf · JWT · nginx

2024 — 2025

Sales & SMM — Own online store

Ran a shop I started myself through social media — where I learned to talk to customers.

2023

Frontend Developer — Virtual Group

Built web interfaces. First paid work writing code.

EDUCATION

2025 — present

AI Engineering — PDP University · 2nd year

SKILLS

AI

LLM integration · Prompt engineering · AI agent workflows ·
AI coding assistants · Machine learning (learning)

Programming

HTML, CSS, Bootstrap · JavaScript · Python and C++ (basics) ·
Reading and explaining code

In my products

FastAPI · PostgreSQL · Docker · Next.js / React · React Native · Linux VPS · Git

LANGUAGES

Uzbek — Native · English — B2
